Chemical Systems:

I have been using Cuprident with my patients for about 18 months.

Those patients who have decreased saliva or tendency toward sticky tooth surfaces. Cuprident is a great help.

I recommend an increase in water consumption up to ½ body weight in ounces of water each day. Some medications will also cause a dry mouth.

When the teeth are less sticky there is less food for the bacteria, therefore a decrease in gingival inflammation and bleeding (gingivitis).

All of the above leads to a healthier, happier mouth.

William A. Westendorf, D.D.S.
